

Chun-Yu (Echo) Shih

Full-Stack Engineer · React · TypeScript · FastAPI · Mobile · CI/CD

Taipei, Taiwan · echoshihtw@gmail.com · linkedin.com/in/echoshihtw · github.com/echoshihtw · echoshihtw.github.io/portfolio

Summary

Full-stack engineer who takes products from an empty repo to a shipped app — frontend, backend, and the pipeline that deploys them. I find the real problem and ship the fix, across web, mobile, and infrastructure.

Experience

Lockerbie Technology

Full-Stack Engineer — Internal Platform Development

Taipei, Taiwan · Dec 2024 – Present

- Own an internal team project-management platform end-to-end as one of two engineers — the **Next.js / React (TypeScript)** frontend and the **FastAPI / Python** backend.
- Architected an **event-driven modular monolith** (bounded modules over a **RabbitMQ** bus with a dedicated consumer) on **ArangoDB**, with **role- and policy-based access control** and secure auth (JWT, Argon2).
- Re-architected deploys to **build-once, promote-by-digest** (GitHub Actions, **GHCR**), cutting redundant rebuilds from **3 builds to 1** so production ships the exact image tested in staging.
- Built the **Next.js frontend** (MUI, TanStack Query, Zustand) with dual client/vendor views and a **force-graph** admin dashboard; tested with **Vitest, React Testing Library, and pytest**.

SPIN.FASHION by Lablaco

Software Engineer · Founding Partner

Singapore · Remote · Aug 2024 – Oct 2024

- Resolved a **critical macOS Electron release blocker** (code-signing, **Apple notarization**, auto-update) to ship the desktop app, and authored the team's release runbook — working remotely across time zones.

Find Recruiter (HR Tech Startup)

Software Engineer

Taipei, Taiwan · Aug 2022 – May 2024

- Led frontend development of a **B2B recruitment / ATS platform (React 18, ~150k LOC)** used by employers and agencies.
- Shipped multiple **OpenAI / ChatGPT features** — a JD generator, AI interview-plan generation, and a CV standardiser.
- Drove an incremental **JavaScript to TypeScript** migration (~30% fewer runtime bugs); built 100+ reusable components with **Redux Toolkit and redux-saga** and **Firebase** realtime.

Independent Engineering Work

Software Engineer · Remote · 2020 – Present

- Built the **Next.js frontend for a Bitcoin coin-selection wallet** (*echology*) alongside a **BDK core maintainer** — UTXO coin-control and fee/waste metrics — plus full-stack apps across fintech and research.

Projects

Cosmora — *Founder* · solo bilingual, multi-tenant **salon platform** (React · Supabase · **Postgres RLS** · per-member permissions), packaged for desktop with Tauri.

Runway — *Founder* · solo cross-platform **Flutter** app (iOS + Android): Clean Architecture, **SQLCipher-encrypted** storage, and **CI/CD to TestFlight + Google Play**.

Skills

Frontend — React · Next.js · TypeScript · MUI · Tailwind · TanStack Query · Zustand

Backend & Data — FastAPI · Python · Node.js · Postgres · ArangoDB · Supabase · RabbitMQ · SQLite

Mobile & Infra — Flutter · Dart · Riverpod · Docker · GitHub Actions · GHCR · AWS

Testing — Vitest · React Testing Library · Jest · pytest

Education

B.A. Italian Language & Culture — Fu Jen Catholic University, Taipei · 2019

Certifications

CS50 Cybersecurity — Harvard / edX (*in progress*) · **Data Science & AI with Python** — Preface · **LangChain** for JavaScript
