

Chun-Yu (Echo) Shih

Software Engineer · React · TypeScript · Next.js · Product Ownership

Taipei, Taiwan (UTC+8) · Remote — APAC hours or async · Available now

echoshihtw@gmail.com · linkedin.com/in/echoshihtw · github.com/echoshihtw · echoshih.com

SUMMARY

Software engineer who designs the system, not just the feature — then builds it, ships it, and keeps it running. Mostly systems of record: project platforms, applicant tracking, client histories. **React**, **TypeScript** and **Node.js**, with **Python** and **FastAPI** behind them.

EXPERIENCE

Lockerbie Technology (Musaeum Ltd, UK group)

Full-Stack Engineer — Internal Platform · Taipei, Taiwan · Dec 2024 – Jul 2026

- Built and ran an early-stage internal project-management platform for the **UK construction sector**, working to **ISO 19650** information-management principles. One of two engineers, sole author of the **Next.js / TypeScript** frontend and its **UI patterns**.
- Refactored the backend into the team's **event-driven modular monolith**, with modules communicating over **RabbitMQ** instead of importing each other, and set up the module template the team builds against. The direction was the team's; the refactor was mine, with **RabbitMQ** and **ArangoDB** new to me.
- Diagnosed a **RabbitMQ** RPC bug where a stale, uninitialised consumer round-robin into login lookups and failed every user's first attempt; fixed it with a fail-fast DB check before broker registration.
- Packaged deploys into a three-file runner folder — **Docker Compose**, Makefile, env — that pulls the promoted production image from **GHCR**: no source checkout, no dev dependencies, an ~80 MB download instead of a full build.
- Given a requirement that layers stay independent, chose **Next.js App Router** and introduced a **BFF security boundary** with server-managed authentication and centralised **CSRF** protection, keeping backend credentials out of browser JavaScript.
- Designed the platform's authorisation model — organisation-level and project-scoped roles resolved into capability flags, so services never reimplement access logic. Tested with **Vitest**, **React Testing Library** and **pytest**.

SPIN.FASHION by Lablaco

Full Stack Engineer & Founding Partner · Singapore · Remote · Aug 2024 – Oct 2024

- Founding partner on the in-store desktop app. Cleared the **macOS code-signing**, **notarisation** and **auto-update** work blocking release, shipped the **Electron** app, and wrote the deployment steps down for the team.

Find Recruiter

Software Engineer · Taipei, Taiwan · Aug 2022 – May 2024

- Took over frontend delivery on a **B2B and B2C recruitment and ATS platform** in **React** and **TypeScript** — two-engineer product team, reporting to the CTO — as the work was handed to me across the two years. Migrated features to **TypeScript** as part of an incremental codebase-wide migration, and authored around 100 of its shared components.
- Wrote the **Server-Sent Events** channel the frontend consumed AI-generated drafts through.
- Built job-opening filtering on the careers pages end to end — filter bar, sorting, the employer settings behind it, and a shared dropdown component with tests.

Independent / Freelance Engineering

Software Engineer · Remote · 2020 – 2024

- Built the **Next.js frontend** for a **Bitcoin coin-selection research tool** with a **BDK core maintainer** (2023), and fixed and optimised a **BigCommerce** storefront for Bdigital (2024).

PROJECTS

Clio — *Founder / Product Engineer* · **React/Supabase** salon operations product — Traditional Chinese first, English second — in daily use at a Tainan salon **since May 2025**, supporting 603 clients and 2,694 service records with **Postgres RLS**, per-member permissions, and a build-failing test keeping database access inside the api layer.

Runway — *Founder / Product Engineer* · Personal financial-runway app in **Flutter**: **Clean Architecture** across a Melos monorepo, **SQLCipher**-encrypted local storage, 7-language localisation. Running on Android.

SKILLS

Frontend & UI — React · TypeScript · Next.js · design systems · UI patterns · TanStack Query · Zustand · Tailwind CSS · MUI · Redux · SvelteKit

Backend & Data — FastAPI · Python · Node.js · Postgres · ArangoDB · Supabase · RabbitMQ · SQLite

Infra & Quality — Docker · GitHub Actions · GHCR · AWS · Vitest · React Testing Library · pytest · Claude Code

Mobile & Desktop — Flutter · Dart · Tauri · Electron

EDUCATION

B.A. Italian Language and Culture — Fu Jen Catholic University, Taipei · 2018

Languages — Mandarin, Taiwanese (native) · English (working language, all roles) · Italian
